

Until Now...

Most systems do not manage daily operational work activities.
They were not designed to control technical information.
They are limited by their ability to perform only singular or partial functions.

Now there is a solution, with no need to re-invent the wheel.
ContinuumEdge® (CE) employs a total integrated risk management philosophy.
All applications within the CE System combine into a central database to store all relevant information for your project and processes, helping guide your preparation and execution. And, CE integrates with your current software systems to provide a total solution for managing your facility or project.

The CE system integrates applications based on the workflow of industrial projects. Completions and Commissioning Management (CCMS), Safety Risk Management (SRMS) and Operability Development Management (ODMS) work together to create a comprehensive enterprise-level System. Combining the CCMS with the Project Governance system (PGMS) enables Managers to access level 5 information throughout a project lifecycle (feasibility, detailed design, FEED, construction, completions/commissioning/startup or operations through to de-commissioning).

Our Software Support Services division supports implementation and training of our Systems, along with a Project Services division that provides contractors for project execution on a stand-alone project basis or specialized support services by task.

Industries Served

Oil & Gas

- Crude Oil
- Natural Gas
- Drilling
- Refining
- Processing
- Offshore

Mining & Metals

- Underground
- Open-pit
- Plant
- Mill
- Concentrator
- Quarry

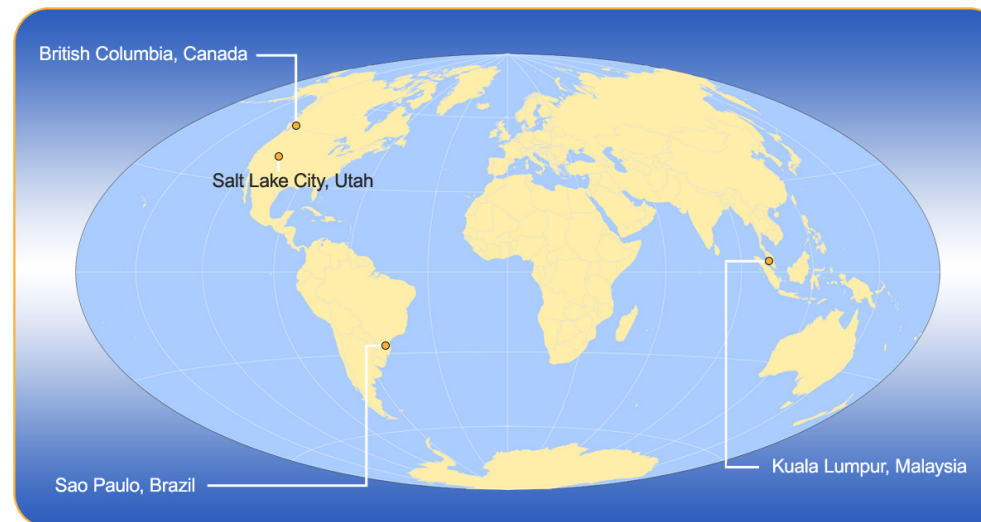

Power & Utilities

- Energy
- Power Generation
- Transmission
- Distribution
- Nuclear

Global Offices

Global Reach, Regional Support

In addition to providing real-time customer service, we provide full service regional responsiveness to accommodate our clients needs.

Headquarters IBS USA

5242 South College Drive

With CE, your process plant has an integrated management system that maintains all construction, commissioning and start-up requirements, all maintenance and shut down functions, all plant upgrade and efficiency improvement activities. Incorporate a centralized documentation and change management system that protects the most important aspects of your business, the safety of your employees and your investment.

OPERABILITY • COMMISSIONING • SAFETY • TURNAROUND

IBS has decades of experience in the Industrial markets, providing technical engineering services and fit-for-purpose software. We have designed and deployed applications to control large capital projects and operational safety for many Fortune 500 companies. Call us or visit our websites for more information.

GLOBAL SERVICES AND SOFTWARE

Delivering Operational Excellence

Plant and Project Services

IBS employs a Plant and Capital Project Services division that achieves operational and capital improvement objectives by understanding operational drivers, culture and tasks. We can perform a project execution on a standalone project basis or simply provide specialized support service by task.

- Mechanical Completions, Commissioning & Ramp-Up Services
- Operational Readiness & Development
- Operations & Maintenance Improvement Services
- CMMS Development (e.g. Standard Jobs, Spares, BOMs)
- Technical & Field Services (e.g. Redline and Drafting)
- Plant Automation & Controls
- Safety & Controlled Document Development
- Training and Curriculum Development (e.g. onsite, WBT, eLearning)

Our Core Values

As a professional services company, our employees are the key to developing and sustaining relationships: they invest time with our clients, understand their businesses, retain accumulated client knowledge and pass it forward. Ultimately, our people deliver the work that adds value to our clients' businesses.

Forging strong, long-term relationships with our clients has been the most important contributor to our success. Ethical conduct ensures these relationships are sustained over time—integrity, fairness, respect, and reliability cement our clients' trust in us.

We are defined by our values:

- Competence
- Initiative
- Shared Commitment
- Integrity
- Teamwork

Benefits:

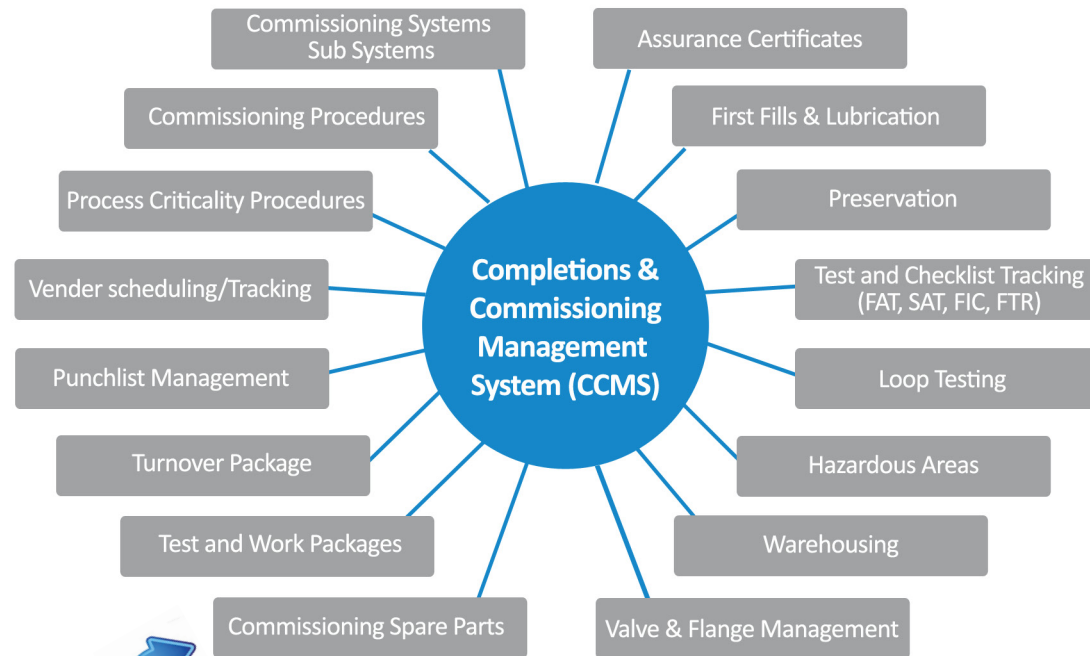

- Trusted source for professional services.
- Streamlined processes for global projects.
- Lower overall costs than our competition.
- Facilitate relationships and align goals.

Our Clients

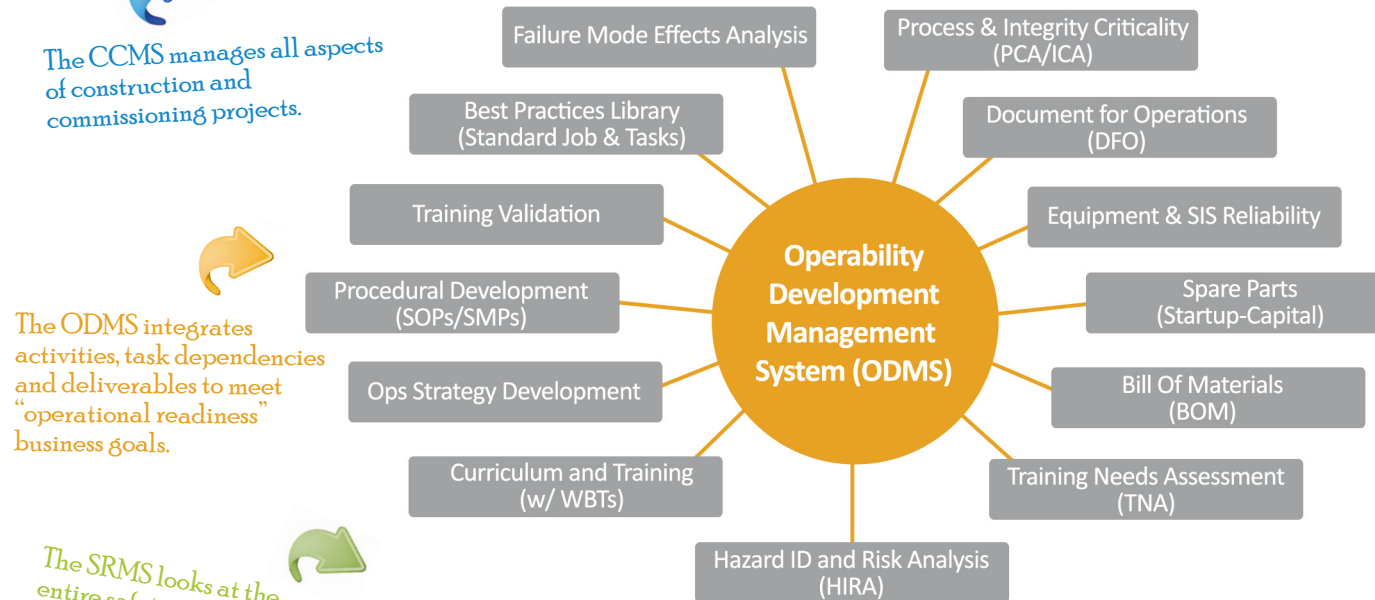

Since 2006, we have provided technical engineering services and fit-for-purpose software. We have worked with many industry leaders throughout the world.

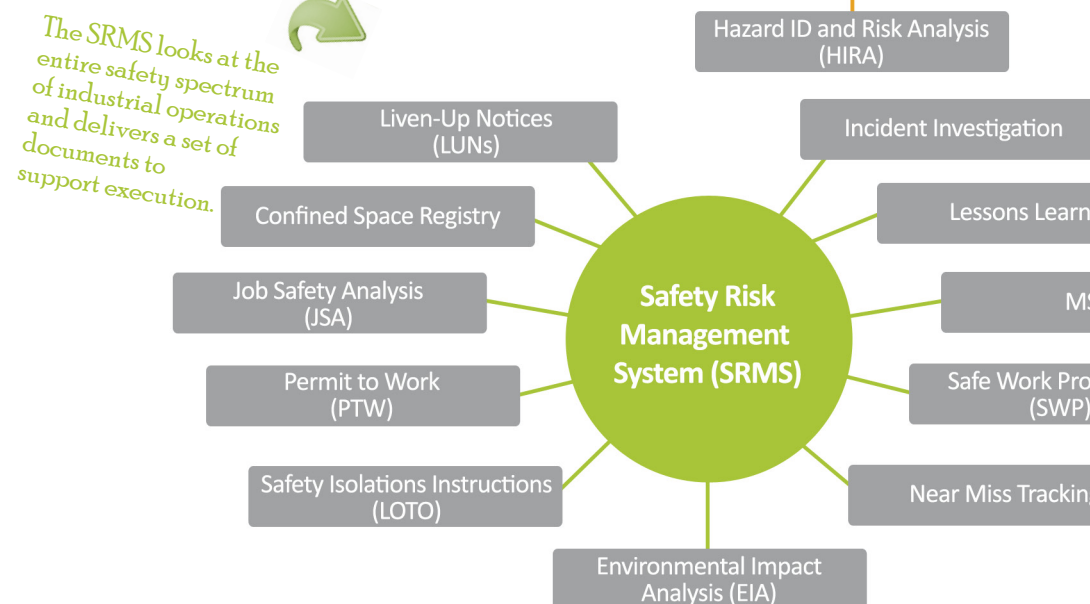

ContinuumEdge's modular logic bares a striking resemblance to DNA, with strings of logic, sequentially interwoven with a brilliant design.

The CCMS manages all aspects of construction and commissioning projects.

The ODMS integrates activities, task dependencies and deliverables to meet "operational readiness" business goals.

The SRMS looks at the entire safety spectrum of industrial operations and delivers a set of documents to support execution.

continuumEDGE®

Plant & Project Lifecycle Management Systems

Project Governance | Engineering | Construction | Commissioning | Operations | Safety | Shutdown

Our Software Solutions are designed to reduce the probability of environmental damage, equipment failure and loss-of-life. As an illustration of this, our Systems manage the full lifecycle of a project by integrating plant and operational information, developing and maintaining critical assets and documents, and controlling daily work processes and activities.

ContinuumEdge® (CE) is a cloud software suite that enables industrial enterprises to report and oversee multi-discipline tasks being performed in real-time. Coupled with rugged tablets and RFID tagging, CE enhances process safety management, reduces personnel "wheel spin" and improves overall enterprise traceability. Serving as an Operations and Maintenance development and tracking platform, CE integrates "critical processes" and operational development and safety into the product suite. CE identifies all critical workflows and information requirements to manage the planning, preparation and execution of engineering, completions, maintenance and safety related activities.

Data Integration

Synchronize information between systems and databases. Transforms large sets of disparate data sources into a single, homogeneous data source.

Industry Web Applications

Improve clients' operational abilities by providing secure and reliable cloud-based connections from anywhere in the world.

Mobile Intelligence

Simplify operations through the use of remote, secure and robust mobile technologies, working in real-time.

Benefits of Our Solutions

ContinuumEdge® is designed to:

- **Centralize** information required for risk analysis and safety document development.
- **Standardize** the development and "linking" of Critical Safety Documentation.
- **Manage** detailed plant information and eliminate inaccurate or conflicting data.
- **Improve** document searching through integration and advanced queries.
- **Communicate** with other applications to improve change management.

All applications are available in English, Spanish and Portuguese.
